Education & Certifications

Major: Computer Science, *Rutgers University, New Brunswick, NJ* — Graduated — **May 2025**

Relevant Coursework: Machine Learning, Artificial Intelligence, Algorithms, Data Structures, Operating Systems

Certifications: *Software Design — Data Science Fundamentals — MLOps and Data Pipeline Orchestration for AI Systems*

Technical Experience

Olixir New York (Omnicom Health) — **New York, NY**

Junior AI Engineer — *Oct 2025 — Present*

- Built full-stack AI applications for pharmaceutical clients as part of the Conversational AI team, delivering both user facing and internal tooling, frontend with Nuxt+Vue.
- Developed backend services using Python and FastAPI with retrieval powered by Azure AI Search; implemented RAG pipelines for context aware responses, Indexes hosted on Azure Blob Storage.
- Applied NLP techniques using spaCy and other NLU frameworks to process domain specific language under GxP constraints.
- Researched and benchmarked LLM/RAG architectures to optimize performance and regulatory alignment.

Collablab (Troy Tutors) LINK — **Remote**

Engineering Manager (Part-time) — *Jan 2026 — Present*

- Lead a team of 5 full-stack engineers, overseeing feature development, system architecture decisions, and sprint execution.
- Directed migration of backend infrastructure from EC2 to AWS Fargate, improving scalability, reliability, and cost.
- Conduct code reviews, approve pull requests, and maintain code quality while remaining hands on in feature development.
- Collaborate with upper management to define product direction and expand engineering capabilities.

Full Stack Software Engineer — *Mar 2025 — Jan 2026 (Part-time from Jun 2025)*

- Engineer #5 at an early stage EdTech startup, contributing to core platform development. Owned end to end feature development, Vue frontend and Node backend.
- Built CI/CD pipelines (playwright) and deployment workflows, and led migration of services to AWS (ECS, S3, CloudFront).

Regeneron Pharmaceuticals — **East Greenbush, NY**

QA Document Control Analyst (Contract) — *Jun 2025 — Oct 2025*

- Managed GxP documentation using OpenText, myQumas, and TrackWise, ensuring accuracy, traceability, and SOP alignment.
- Improved SharePoint workflows by adding features and optimizing access, enhancing cross-team collaboration.

QA IRM Developer Intern — *May 2024 — Sep 2024*

- Built and launched a SharePoint system handling 1000+ requests in its first week, improving efficiency by 27% and earning a superlative award among all interns.

Projects

JUDGE: Defensive Coverage Analysis (NFL Big Data Bowl 2026) — ***Python, XGBoost, Pandas, NumPy*** | **Oct 2025 — Jan 2026**

- Developed a machine learning pipeline to identify and quantify "undercut" defensive behavior using NFL player tracking data.
- Designed a novel geometric feature ("Jump Line") to model defender movement relative to receiver routes and ball trajectory.
- Trained an XGBoost regression model to predict expected defender positioning, achieving strong performance ($R^2 = 0.75$).
- Created the JUDGE metric (Jump Underneath Distance Gained Over Expected) to evaluate and rank defensive back performance independent of play outcomes.

Custom Neural Network Model Generator Web Application — ***Flask, PyTorch, React.js, Docker, TensorFlow*** | **Dec 2024 — Jun 2025**

- Built a full-stack ML platform for training, evaluating, and exporting custom image classification models
- Improved model accuracy by 40% using batch normalization, dropout, and data augmentation to enhance generalization

Crime Catcher AI Security System (Team Hackathon) — ***Tkinter, Flask, OpenCV, Vue.js, SQLite, PyTorch*** | **Nov 2024**

- Developed an AI powered security system that monitors data feeds to detect weapons using machine learning models like YOLO.
- Integrated real time alerts for weapon detection with automatic recording when motion/dangerous objects were detected

Extracurricular/Leadership Roles

Collegiate Powerlifter, *Rutgers University* — **Sep 2023 — Present**

- Earned 6th place for the 67.5kg weight class (December 2024) at Collegiate Championships and qualified for Collegiate Nationals.

Secretary (Executive Board), *Pakistani Student Association* — **Sep 2022 — May 2025**

- Organized events, managed communications, and developed an NFC based attendance system PSA at Rutgers (still used)

Skills

Languages	Python, TypeScript/JavaScript, Java, SQL
AI / ML	PyTorch, TensorFlow, scikit-learn, spaCy, RAG pipelines, LLM evaluation & prompting
Frameworks & Tools	FastAPI, Node.js, Express, Vue.js, React.js, Flask, Socket.IO, Git, REST APIs, WebSockets, Linux/Unix
Cloud & Data	AWS (ECS, Fargate, S3, CloudFront, Lambda), Azure (App Service, AI Search), Docker, CI/CD pipelines, MongoDB, PostgreSQL, Power BI, SharePoint
